

2019-20 Snowpack Summary

Submitted by Alex Marienthal on Sun, 04/19/2020 - 19:18

In the Rocky Mountains early season snow is typically not good for [stability](#). In southwest Montana, this year was on the worse end of the spectrum for bad [stability](#) caused by early season snow. Weak snow near the base of the snowpack resulted in large avalanches all season. Avalanche activity peaked with a widespread [deep slab avalanche](#) cycle in February. More snow followed and there was steady avalanche activity through April. For the first winter since 2012-13 there were zero avalanche fatalities in southwest Montana.
